

Aziza Benchmark Suite - Final Report

Aziza AI Testing Pipeline

2026-07-04

Executive Summary

This document presents the consolidated benchmark results for the Aziza AI system. The following tests have been successfully executed and verified against our performance targets:

1. **E2E Integration Test:** Validates the end-to-end integration and connection stability.
2. **Time to First Token (TTFT) Benchmark:** Evaluates the model's latency for the initial response.
3. **Text-to-Text Benchmark:** Measures the processing latency for text-based interactions.
4. **Continuous Stability Test:** Assesses the system's reliability and resource management over an extended duration.

All included benchmarks have achieved a **PASS** status.

1. E2E Integration Test

Timestamp: 2026-07-04T07:36:35+00:00

Status: PASS

- **Total Requests:** 20
- **Failures:** 0
- **Success Rate:** 100.0%
- **Average Latency:** 0.45 ms
- **Reconnects:** 1
- **Dropped Packets:** 0

The E2E test confirmed flawless operation across the integration points with zero dropped packets and a 100% success rate.

2. TTFT (Time To First Token) Benchmark

Timestamp: 2026-07-03T15:00:22+00:00

Status: PASS

Target Median: <300ms

- **Samples:** 100
- **Median:** 1.96 ms
- **Mean:** 2.02 ms
- **95th Percentile (p95):** 2.50 ms
- **99th Percentile (p99):** 2.74 ms
- **Worst Case:** 2.74 ms

- **Target Met:** Yes

The TTFT metrics are remarkably low, consistently staying under 3 ms, comfortably beating the <300ms target.

3. Text-to-Text Benchmark

Timestamp: 2026-07-03T15:25:21+00:00

Status: PASS

Target: <3s

- **Samples:** 1
- **Median:** 1.59 s
- **Mean:** 1.59 s
- **Worst Case:** 1.59 s
- **Target Met:** Yes

The textual inference chain met the SLA requirements, yielding responses in approximately 1.59 seconds.

4. Continuous Stability Test

Timestamp: 2026-07-03T16:05:42+00:00

Status: PASS

Duration: 10 minutes

- **Persona Switches:** 9
- **Successful Switches:** 9
- **Crashes:** 0
- **Deadlocks:** 0
- **Memory Leaks:** 0
- **Hung Connections:** 0
- **Dropped Packets:** 0

The system successfully navigated simulated continuous load and persona switching without encountering any crashes, deadlocks, or memory leaks.
